

Page 1: A Curious Dreamer

In 1955, a baby boy named Steve Jobs was born in California. He was adopted by Paul and Clara Jobs, who raised him with love and encouragement. From a young age, Steve was curious about how things worked. He enjoyed taking apart electronic devices and putting them back together. As a teenager, Steve met a brilliant friend named Steve Wozniak, who shared his passion for technology. The two spent countless hours experimenting with electronics and dreaming about the future. Steve believed that computers should not be complicated machines used only by scientists. He imagined a world where ordinary people could use computers in their homes, schools, and workplaces. This dream would eventually change the world. After briefly attending college, Steve left school to pursue his own path. Though he had little money, he had big ideas and endless determination.

Page 2: The Birth of Apple

In 1976, Steve Jobs and Steve Wozniak started a small company in Jobs's family garage. They named it Apple. Their first product was the Apple I computer. Wozniak designed it, while Jobs focused on selling and promoting it. The computer attracted attention because it was affordable and easy to use compared to many other machines of the time. Soon after, they introduced the Apple II. It became one of the first highly successful personal computers. Families, schools, and businesses began buying Apple computers in large numbers. Apple grew rapidly. What had started in a garage was becoming one of the most exciting technology companies in America.

Page 3: Challenges and New Beginnings

As Apple expanded, Steve Jobs pushed his teams to create groundbreaking products. In 1984, Apple launched the Macintosh, a computer that featured a graphical interface and a mouse, making it much easier for people to use. Although the Macintosh was innovative, disagreements arose within Apple's leadership. In 1985, Steve Jobs left the company he had helped create. Many people thought his career was over, but Steve refused to give up. He started NeXT and invested in Pixar. Pixar later produced *Toy Story*, the world's first fully computer-animated feature film. Though he was no longer at Apple, his journey was far from finished.

Page 4: Returning to Apple

By the mid-1990s, Apple was struggling. In 1997, Apple acquired NeXT, bringing Steve Jobs back to the company. Jobs quickly began transforming Apple. He simplified product lines, encouraged innovation, and focused on creating products that combined technology with beautiful design. His efforts led to the launch of the iMac, which became a huge success. Apple regained public attention and financial strength. Under his leadership, Apple was no longer just surviving—it was thriving.

Page 5: Changing the World

The 2000s became Apple's golden era. Steve Jobs introduced revolutionary products, including the iPod, iPhone, and iPad. The iPhone, launched in 2007, transformed the way people communicate, work, and access information. It became one of the most influential products in history. Steve Jobs believed that technology should be simple, elegant, and powerful. His vision helped Apple become one of the world's most valuable companies. From a small garage startup to a global technology giant, the rise of Apple is a story of imagination, perseverance, and innovation.
